

Safe campus = systemic & focused protection

Professor Dr Dr Dr Wolfgang Mastnak

European Academy of Sciences & Arts / New York Academy of Sciences
Beijing Normal University / University of Music and Performing Arts Munich

4 Core issues

- Threat assessment and adequate measures according to politically & economically independent virology and epidemiology
- Identification of students, teachers & staff in risk and appropriate care
- Panic-mongering and exaggerated measures cause aggression, harassment, stress syndromes & suicide
- Boost the immune system through cardiorespiratory fitness, healthy BMI & stress-management

- Singular and inadequate COVID-19-measures can cause illness, suffering and death on the campus.
- Humane campuses respect life quality, good working conditions and healthy environments.
- Healthy campuses are well prepared for further (and more aggressive) pandemics.

**Campus – a model for best practice
in public health**
